

SKIIX

Project Documentation — v1.0

INTERNAL · CONFIDENTIAL · 2026

What is Skiix?

We built Skiix because we were tired of apps that hijack your time. It's a social media platform that actually respects how you want to use it — with real limits on how much you post and consume, so the experience stays meaningful instead of mindless.

Core Features

- **Focus Mode**

Hit the toggle and your feed goes quiet. You can still post and message people — you just won't be pulled into scrolling. It's there when you need a break from the noise.

- **Daily Post Limit**

Completely optional — you choose whether to turn it on or off, anytime you want. If you do enable it, it keeps your posting intentional and the feed less cluttered. No pressure either way.

- **Feed Button**

The feed isn't the first thing you see when you open the app. You have to tap into it on purpose. Small change, big difference in how the app feels to use.

- **Clean Profile & Posts**

Your profile and posts are clean and minimal — likes and interactions are all there, just without the clutter. Everything feels intentional.

- **Direct Messaging**

Private conversations between users — straightforward, no clutter.

Tech Stack

Layer	Technology	Purpose
Frontend	React Native	One codebase, works on both iOS and Android
Backend	Node.js + Express	Handles all the logic, APIs, and server-side stuff
Database	PostgreSQL (Supabase)	Where all the data lives — reliable and scalable

Real-time	Supabase	Keeps the feed and notifications up to date instantly
Auth	Supabase Auth	Handles signups, logins, and keeping accounts secure
Storage	Supabase Storage	Stores all photos and videos users upload
